

Attention all teachers! The world needs your recycling superpowers to save the planet! By teaching kids about metal recycling, you'll be equipping them with the knowledge to turn trash into treasure and make a real impact on the environment. From aluminum cans to copper wire, steel appliances, Holiday Lights, to brass fixtures, there's a metal hero waiting inside every piece of scrap! Imagine the excitement your students will have when they realize that every metal item they recycle is one step closer to saving the planet. So, put on your superhero capes and let's get recycling!

The Million Cans Recycling Program steps are as follows:

- **Read "The Girl Who Recycled 1 Million Cans" to your students:** Start by reading the book to your students to introduce them to the importance of recycling metal and the impact they can make.
- **Decorate boxes to take home:** Encourage your students to decorate their own metal recycling boxes to take home. This will make the process fun and engaging for them.
- **Collection boxes:** Each student can take their decorated box home to collect metal. They can also encourage their family and friends to bring in metal to recycle.
- **Coloring and goal setting:** Encourage your students to color in sheets and set their own recycling goals. Free coloring sheets and worksheets can be found on our website.
- **Scrap Yard drop off:** The local scrap yard will drop off a roll off bin in the school parking lot for you to store the collected metal.
- **Collection and recycling:** Once the roll off bin is full, the scrap yard will take it away and recycle the metal.
- **Donating to the school:** The scrap yard will donate the money from the recycled metal to your school, which is a great way to raise funds for your students.

This program provides an exciting opportunity for your students to learn about the importance of recycling and sustainability, while also raising funds for your school. We hope you and your students will join us in this important mission to eliminate metal from the waste stream and make a positive impact on the world.
