We ❤️ our students!

I recently completed Scrap University and found it extremely beneficial. Coming into the scrap industry with no prior knowledge or experience was intimidating because operating the scale requires a good understanding of the metals and how to decipher which is which.

Trying to pick up so much just from hearing names and numbers I didn't understand being thrown around would've taken a MUCH longer time—especially because each category can have so many upgrades.

I'm incredibly grateful I had the opportunity to complete Scrap University, it's put me ahead by months and I'm so much more confident. I highly recommend Scrap University to anyone getting into the metal recycling field, and even people in the trades who want to learn how to maximize their profit when they bring metal to the yard.

– Megan Humphrey @ HW Green

Our goal is to educate the metal recycling industry to the highest levels possible!

We are happy to work within individual budgets.

Please reach out to learn more today!
